

AXS ASTORIA INFLATION SENSITIVE ETF

PPI

Rising inflation erodes buying power and can diminish investment returns, especially in traditional stock and bond portfolios. Investing in “inflation-sensitive” assets can help investors limit inflation risk and seek positive returns.

Introducing PPI

One-stop ETF with broad multi-asset exposures to benefit from inflation

- **Investment objective:** An actively managed ETF that seeks long-term capital appreciation in inflation-adjusted terms.
- **Inflation-sensitive:** Seeks to mitigate the negative impact of inflation and increase performance potential by investing in assets the portfolio manager believes are positioned to benefit in an inflationary environment.
- **Diversified exposure:** Offers diversified, multi-asset exposure to companies, sectors and securities with the potential to benefit, directly or indirectly, from rising prices.
- **Renowned manager:** Managed by Astoria Portfolio Advisors, leading experts in ETF investing and inflation-sensitive portfolios.
- **ETF benefits:** Offers the intra-day liquidity, transparency and tax efficiency of exchange traded funds.

Comprehensive Opportunity Set

Instead of betting on one inflation strategy, PPI invests in a diversified, dynamic set of asset classes that in combination may create a stronger buffer against inflation.

Cyclicals

Equities/ETFs of companies in sectors that historically have benefited from inflationary periods.

Examples: industrials, home construction, banks and more.

Commodities

ETFs of physical commodities and commodity producers that have performed well in rising price environments.

Examples: precious metals, agriculture, copper, gold, oil, etc.

TIPS

Treasury Inflation-Protected Securities designed to pay higher yields when inflation is on the rise.

AXS ASTORIA INFLATION SENSITIVE ETF

PPI

DESCRIPTIONS OF TERMS

CPI (Consumer Price Index) measures the average change in prices over time that consumers pay for a basket of goods and services. **ETF (exchange traded fund)** is a type of security that tracks an index, sector, commodity, or other asset, but which can be purchased or sold on a stock exchange the same way a regular stock can. **Market Price** is the current price at which shares are bought and sold. Market returns are based upon the last trade price. **NAV (net asset value)** is the dollar value of a single share, based on the value of the underlying assets of the fund minus its liabilities, divided by the number of shares outstanding. Calculated at the end of each business day. **PPI (Producer Price Index)** is a group of indexes published by the Bureau of Labor Statistics that calculates and represents the average movement in selling prices from domestic production over time. **TIPS (Treasury Inflation-Protected Securities)** is a Treasury bond that is indexed to an inflationary gauge to protect investors from the decline in the purchasing power of their money.

IMPORTANT RISK DISCLOSURE

ETFs involve risk including possible loss of principal. There is no assurance that the Fund will achieve its investment objective.

There is no guarantee the sectors or asset classes the advisor identifies will benefit from inflation. Fund may invest a larger portion of its assets in one or more sectors than many other funds, and thus will be more susceptible to negative events affecting those sectors.

Equity Securities Risk: Equity securities may be particularly sensitive to rising interest rates, as the cost of capital rises and borrowing costs increase. Equity securities may decline significantly in price over short or extended periods of time, and such declines may occur in the equity market as a whole, or in only a particular country, company, industry or sector of the market.

Commodities Risk: Commodity prices can have significant volatility, and exposure to commodities can cause the value of the Fund's shares to decline or fluctuate in a rapid and unpredictable manner. The values of commodities may be affected by changes in overall market movements, real or perceived inflationary trends, commodity index volatility, changes in interest rates or currency exchange rates, population growth and changing demographics, international economic, political and regulatory developments, and factors affecting a particular region, industry or commodity.

Futures Contracts Risk: The Fund expects that certain of the Underlying ETFs in which it invests will utilize futures contracts for its commodities investments. The risk of a position in a futures contract may be very large compared to the relatively low level of margin the underlying ETF is required to deposit. In many cases, a relatively small price movement in a futures contract may result in immediate and substantial loss or gain to the investor relative to the size of a required margin deposit. The prices of futures contracts may not correlate perfectly with movements in the securities or index underlying them.

TIPS Risk: Principal payments for Treasury Inflation-Protection Securities are adjusted according to changes in the Consumer Price Index (CPI). While this may provide a hedge against inflation, the returns may be relatively lower than those of other securities. Similar to other issuers, changes to the financial condition or credit rating of the U.S. government may cause the value of the Fund's exposure to U.S. Treasury obligations to decline.

Shares of ETFs are bought and sold at market price (not NAV) and are not individually redeemed from the ETF. Brokerage commissions will reduce returns. NAVs are calculated using prices as of 4:00 PM Eastern Time. The closing price is the midpoint between the bid and ask price as of the close of exchange. Closing price returns do not represent the returns you would receive if you traded shares at other times.

Market Turbulence Resulting from COVID-19. The outbreak of COVID-19 has negatively affected the worldwide economy, individual countries, individual companies and the market in general. The future impact of COVID-19 is currently unknown, and it may exacerbate other risks that apply to the Fund.

Investors should carefully consider the investment objectives, risks, charges and expenses of AXS Astoria Inflation Sensitive ETF. This and other important information about the Fund is contained in the Prospectus, which can be obtained by visiting www.axsinvestments.com. The Prospectus should be read carefully before investing.
