

Before you invest, you may want to review the Fund’s prospectus, which contains more information about the Fund and its risks. You can find the Fund’s Statutory Prospectus and Statement of Additional Information and other information about the Fund online at http://www.axsinvestments.com. You may also obtain this information at no cost by calling 1-866-984-2510 or by sending an e-mail request to info@axsinvestments.com. The Fund's Prospectus and Statement of Additional Information, both dated December 23, 2021, as amended January 6, 2022, as each may be amended or supplemented, are incorporated by reference into this Summary Prospectus.

INVESTMENT OBJECTIVE

AXS Astoria Inflation Sensitive ETF (the “Fund”) seeks long-term capital appreciation in inflation-adjusted terms.

FEES AND EXPENSES OF THE FUND

This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund (“Shares”). Investors may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and example set forth below.

Annual Fund Operating Expenses

(expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.70%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses ⁽¹⁾	0.00%
Acquired Fund Fees and Expenses ⁽¹⁾	0.01%
Total Annual Fund Operating Expenses	0.71%

(1) “Other Expenses” and “Acquired Fund Fees and Expenses” are estimates based on the expenses the Fund expects to incur for the current fiscal year.

EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain at current levels. This example does not include the brokerage commissions that investors may pay to buy and sell Shares. Although your actual costs may be higher or lower, your costs, based on these assumptions, would be:

1 Year	3 Years
\$73	\$227

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or “turns over” its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in Total Annual Fund Operating Expenses or in the example, may affect the Fund’s performance. At the date of this prospectus, the Fund does not have an operating history and turnover data therefore is not available.

PRINCIPAL INVESTMENT STRATEGIES

The Fund is an actively managed exchange-traded fund (“ETF”) that seeks to achieve its investment objective by investing principally in securities across multiple asset classes which have the potential to benefit, either directly or indirectly, from increases in the rate of rising costs of goods and services (i.e., inflation). These investments are expected to include, but are not limited to, equity securities of companies engaged in the energy, financials, industrial, and materials sectors, as well as investments in other ETFs (“Underlying ETFs”) that directly or indirectly invest in commodities or fixed income securities. The Fund’s investments in equity interests are generally expected to include common stock, general and limited partnership interests of publicly traded master limited partnerships (“MLPs”) and units of royalty trusts. The Fund may invest in non-U.S. securities, including depositary receipts. AXS Investments LLC serves as the

Fund's investment adviser (the "Adviser" or "AXS") and Astoria Portfolio Advisors LLC serves as the investment sub-adviser to the Fund (the "Sub-Adviser" or "Astoria"). Astoria manages the investment strategy and portfolio selection for the Fund.

In pursuing its investment strategy, the Sub-Adviser seeks to identify investments that it believes are positioned to benefit from a sustained inflationary environment, such as companies the overall profits of which are expected to increase with rising consumer, producer, and raw material prices. Examples of companies that the Sub-Adviser believes may benefit from a rising interest rate environment include, but are not limited to, financial services companies, consumer discretionary companies, such as homebuilders and household durables, companies producing industrial machinery, metals and steel, and companies engaged in the exploration, production, transportation and mining of commodity assets, such as oil, gas, coal, agriculture, minerals and other real assets, including the passive ownership of royalties or production streams of such assets. The Sub-Adviser expects that the Fund's portfolio generally will include the equity securities of approximately 50-60 issuers that may range from mid- to large capitalization companies.

Although the majority of the Fund's portfolio securities are expected to be of issuers that are either domiciled in or earn a majority of their revenues from activities within the United States, the Fund also may have significant exposure to issuers that are either domiciled in or earn a majority of their revenues from activities within Asia, Canada, or Europe.

The Fund may also invest in Underlying ETFs with exposure to commodities that have an opportunity to benefit from higher demand, elevated global growth, or a shortage of supply, including, but not limited to, crude oil, copper, natural gas, gold, silver, platinum, palladium, soybean, live cattle, coffee, and corn. The Underlying ETFs typically gain exposure to these commodities through the use of commodity-linked derivatives, including futures contracts. The Fund may also invest in Underlying ETFs that invest in investment grade fixed income securities of any maturity including inflation-protected public obligations of the U.S. Treasury, commonly known as "TIPS."

In selecting investments for the Fund's portfolio, the Sub-Adviser employs a top-down quantitative approach selecting the companies which pass various fundamental screens, such as valuations, growth prospects, and quality measures. The Sub-Adviser's research and analysis seeks to leverage data from a variety of external sources as well as internal research in order to identify and capitalize on trends that have implications for individual companies, sectors or commodities exposures. The Sub-Adviser expects to sell portfolio holdings when it determines they no longer fit the Fund's investment strategy or are no longer attractively valued on a fundamental basis.

The Fund is classified as "non-diversified" under the Investment Company Act of 1940 (the "1940 Act").

PRINCIPAL RISKS

As with all investments, there are certain risks of investing in the Fund. The Fund's Shares will change in value and you could lose money by investing in the Fund. An investment in the Fund does not represent a complete investment program. An investment in the Fund is not a bank deposit and it is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency, the Adviser, or any of their affiliates. You should consider carefully the following risks before investing in the Fund. The order of the risk factors set forth below does not indicate the significance of any particular risk factor.

Market Risk. Market risk is the risk that a particular security, or Shares of the Fund in general, may fall in value. Securities are subject to market fluctuations caused by such factors as economic, political, regulatory or market developments, changes in interest rates and perceived trends in securities prices. Shares of the Fund could decline in value or underperform other investments. In addition, local, regional or global events such as war, acts of terrorism, spread of infectious diseases or other public health issues, recessions, or other events could have a significant negative impact on the Fund and its investments. For example, the coronavirus disease 2019 (COVID-19) global pandemic and the aggressive responses taken by many governments, including closing borders, restricting international and domestic travel, and the imposition of prolonged quarantines or similar restrictions, had negative impacts, and in many cases severe impacts, on markets worldwide. While the development of vaccines has slowed the spread of the virus and allowed for the resumption of normal business activity in the United States, many countries continue to impose significant measures in an attempt to slow the spread. Additionally, there is no guarantee that vaccines will be effective against emerging variants of the disease. As this global pandemic illustrated, such events may affect certain geographic regions, countries, sectors and industries more significantly than others. These events also adversely affect the prices and liquidity of the Fund's portfolio securities or other instruments and could result in disruptions in the trading markets. Any of such circumstances could have a materially negative impact on the value of the Fund's Shares and result in increased market volatility. During any such events, the Fund's Shares may trade at increased premiums or discounts to their net asset value.

Equity Securities Risk. The value of the Fund's shares will fluctuate with changes in the value of the equity securities in which it invests. Equity securities prices fluctuate for several reasons, including changes in investors' perceptions of the financial condition of an issuer or the general condition of the relevant equity market, such as market volatility, or when political or economic events affecting an issuer occur. Common stock prices may be particularly sensitive to rising interest rates, as the cost of capital rises and borrowing costs increase. Equity securities may decline significantly in price over short or extended periods of time, and such declines may occur in the equity market as a whole, or they may occur in only a particular country, company, industry or sector of the market.

Debt Securities Risk. Investments in debt securities subject the holder to the credit risk of the issuer. Credit risk refers to the possibility that the issuer or other obligor of a security will not be able or willing to make payments of interest and principal when due. Generally, the value of debt securities will change inversely with changes in interest rates. To the extent that interest rates rise, certain underlying obligations may be paid off substantially slower than originally anticipated and the value of those securities may fall sharply. During periods of falling interest rates, the income received by the Fund may decline. If the principal on a debt security is prepaid before expected, the prepayments of principal may have to be reinvested in obligations paying interest at lower rates. Debt securities generally do not trade on a securities exchange making them generally less liquid and more difficult to value than common stock.

U.S. Treasury Obligations and TIPS Risk. U.S. Treasury obligations, including TIPS, may differ from other securities in their interest rates, maturities, times of issuance and other characteristics. TIPS are income-generating instruments whose interest and principal are adjusted for inflation. The inflation adjustment, which is typically applied monthly to the principal of the bond, follows a designated inflation index, the Consumer Price Index (CPI), and TIPS' principal payments are adjusted according to changes in the CPI. While this may provide a hedge against inflation, the returns may be relatively lower than those of other securities. Similar to other issuers, changes to the financial condition or credit rating of the U.S. government may cause the value of the Fund's exposure to U.S. Treasury obligations to decline.

Foreign Securities Risk. Investments in the securities of non-U.S. issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Some countries and regions have experienced security concerns, war or threats of war and aggression, terrorism, economic uncertainty, natural and environmental disasters and/or systemic market dislocations that have led, and in the future may lead, to increased short-term market volatility and may have adverse long-term effects on the U.S. and world economies and markets generally. Foreign issuers are often subject to less stringent requirements regarding accounting, auditing, financial reporting and record keeping than are U.S. issuers, and therefore not all material information will be available. Securities exchanges or foreign governments may adopt rules or regulations that may negatively impact the Fund's ability to invest in foreign securities or may prevent the Fund from repatriating its investments. Less developed securities markets are more likely to experience problems with the clearing and settling of trades, as well as the holding of securities by local banks, agents and depositories. The less developed a country's securities market is, the greater the likelihood of custody problems.

Geographic Investment Risk. The Fund may invest a substantial amount of its assets in securities of issuers located in a single country or geographic region. As a result, any changes to the regulatory, political, social or economic conditions in such country or geographic region will generally have greater impact on the Fund than such changes would have on a more geographically diversified fund and may result in increased volatility and greater losses. This risk may be especially pronounced to the extent the Fund invests in countries and regions experiencing, or likely to experience, security concerns, war, threats of war, terrorism, economic uncertainty and natural disasters. The Fund may have significant risks with respect to the following geographic regions:

- **Asia Risk.** Investments in securities of issuers in certain Asian countries involve risks that are specific to Asia, including certain legal, regulatory, political and economic risks. Certain Asian countries have experienced expropriation and/or nationalization of assets, confiscatory taxation, political instability, armed conflict and social instability as a result of religious, ethnic, socio-economic and/or political unrest. In particular, escalated tensions involving North Korea and any outbreak of hostilities involving North Korea, or even the threat of an outbreak of hostilities, could have a severe adverse effect on Asian economies. Some economies in this region are dependent on a range of commodities, are strongly affected by international commodity prices and are particularly vulnerable to price changes for these products. The market for securities in this region may also be directly influenced by the flow of international capital and by the economic and market conditions of neighboring countries. Some Asian economies are highly dependent on trade; economic conditions in other countries within and outside of Asia can impact these economies.
- **Canada Risk.** The Fund is subject to certain risks specifically associated with investments in the securities of Canadian issuers. The Canadian economy is heavily dependent on the demand for natural resources and agricultural products. Canada is a major producer of commodities such as forest products, metals, agricultural products, and energy related products like oil, gas, and hydroelectricity. Accordingly, a change in the supply and demand of these resources, both domestically and internationally, can have a significant effect on Canadian market performance. Canada is a top producer of zinc and uranium and a global source of many other natural resources, such as gold, nickel, aluminum, and lead. Conditions that weaken demand for such products worldwide could have a negative impact on the Canadian economy as a whole. Changes to the U.S. economy may significantly affect the Canadian economy because the U.S. is Canada's largest trading partner and foreign investor. These and other factors could have a negative impact on the Fund and its investments in Canada.
- **Europe Risk.** Most developed countries in Western Europe are members of the European Union ("EU"), and many are also members of the European Monetary Union ("EMU"), which requires compliance with restrictions on inflation rates, deficits and debt levels. Unemployment in certain European nations is historically high and several countries face significant debt problems. These conditions can significantly affect every country in Europe. The euro is the official currency of the EU and, accordingly, the Fund's investment in European securities may lead to significant exposure to the euro and events affecting it.

Recent market events affecting several EU member countries have adversely affected the sovereign debt issued by those countries, and ultimately may lead to a decline in the value of the euro. A significant decline in the value of the euro, or the exit of a country from the EU or EMU, may produce unpredictable effects on trade and commerce generally and could lead to increased volatility in financial markets worldwide. Political or economic disruptions in European countries, even in countries in which the Fund is not invested, may adversely affect security values and thus the Fund's holdings. In particular, the Fund's investments in the United Kingdom and other European countries may be significantly impacted by the decision of the United Kingdom to leave the EU (known as "Brexit"). Brexit has introduced significant uncertainty and may have a negative impact on the economy and currency of the United Kingdom and European countries, including increased market volatility and illiquidity and potentially lower economic growth.

Currency Risk. Investments directly in foreign (non-U.S.) currencies or in securities that trade in, and receive revenues in, foreign (non-U.S.) currencies are subject to the risk that those currencies will decline in value relative to the U.S. dollar or, in the case of hedging positions, that the U.S. dollar will decline in value relative to the currency being hedged. Currency rates in foreign countries may fluctuate significantly over short periods of time for a number of reasons, including changes in interest rates, intervention (or the failure to intervene) by U.S. or foreign governments, central banks or supranational entities such as the International Monetary Fund, or by the imposition of currency controls or other political developments in the United States or abroad.

MLP Risk. Investments in securities of MLPs involve certain risks different from or in addition to the risks of investing in common stocks. MLP common units can be affected by macro-economic factors and other factors unique to the partnership or company and the industry or industries in which the MLP operates. Certain MLP securities may trade in relatively low volumes due to their smaller capitalizations or other factors, which may cause them to have a high degree of price volatility and illiquidity. The structures of MLPs create certain risks, including, for example, risks related to the limited ability of investors to control an MLP and to vote on matters affecting the MLP, risks related to potential conflicts of interest between an MLP and the MLP's general partner, the risk that an MLP will generate insufficient cash flow to meet its current operating requirements, the risk that an MLP will issue additional securities or engage in other transactions that will have the effect of diluting the interests of existing investors, and risks related to the general partner's right to require unit-holders to sell their common units at an undesirable time or price.

Commodities Risk. The Fund has exposure to commodities through investments in Underlying ETFs. Commodity prices can have significant volatility, and exposure to commodities can cause the value of the Fund's shares to decline or fluctuate in a rapid and unpredictable manner. The values of commodities may be affected by changes in overall market movements, real or perceived inflationary trends, commodity index volatility, changes in interest rates or currency exchange rates, population growth and changing demographics, international economic, political and regulatory developments, and factors affecting a particular region, industry or commodity, such as drought, floods, or other weather conditions, livestock disease, changes in storage costs, trade embargoes, competition from substitute products, transportation bottlenecks or shortages, fluctuations in supply and demand, and tariffs. A liquid secondary market may not exist for certain commodity investments, which may make it difficult for the Fund to sell them at a desirable price or at the price at which it is carrying them. The commodity markets are subject to temporary distortions or other disruptions due to, among other factors, lack of liquidity, the participation of speculators, and government regulation and other actions.

Commodity-Linked Derivatives Risk. The value of a commodity-linked derivative instrument in which an Underlying ETF may invest typically is based upon the price movements of the underlying commodity or an economic variable linked to such price movements. The prices of commodity-related investments may fluctuate quickly and dramatically as a result of changes affecting a particular commodity and may not correlate to price movements in other asset classes, such as stocks, bonds and cash. Commodity-linked derivatives are subject to the risk that the counterparty to the transaction, the exchange or trading facility on which they trade, or the applicable clearing house may default or otherwise fail to perform. In addition, each exchange or trading facility on which the derivatives are traded has the right to suspend or limit trading in all futures or other instruments that it lists. An Underlying ETF's use of commodity-linked derivatives may also have a leveraging effect on the Underlying ETF's portfolio. Leverage generally magnifies the effect of a change in the value of an asset and creates a risk of loss of value on a larger pool of assets than the Fund would otherwise have had. An Underlying ETF is required to post margin in respect to its holdings in derivatives. Each of these factors and events could have a significant negative impact on the Fund.

Real Assets Risk. The Fund's investments in securities linked to real assets, such as precious metals, commodities, land, equipment and natural resources, involve significant risks, including financial, operating, and competitive risks. Investments in securities linked to real assets may expose the Fund to adverse macroeconomic conditions, such as changes and volatility in commodity prices, a rise in interest rates or a downturn in the economy in which the asset is located. Changes in inflation rates or in the market's inflation expectations may adversely affect the market value of equities linked to real assets.

Underlying ETF Risk. The Fund's investment in shares of Underlying ETFs subjects it to the risks of owning the holdings underlying the Underlying ETF, as well as the same structural risks faced by an investor purchasing shares of the Fund, including authorized participant concentration risk, market maker risk, premium/discount risk and trading issues risk. As a shareholder in another ETF, the Fund bears its proportionate share of the Underlying ETF's expenses, subjecting Fund shareholders to duplicative expenses.

Futures Contracts Risk. The Fund expects that certain of the Underlying ETFs in which it invests will utilize futures contracts for its commodities investments. Futures contracts are typically exchange-traded contracts that call for the future delivery of an asset by one party to another at a certain price and date, or cash settlement of the terms of the contract. The risk of a position in a futures contract may be very large compared to the relatively low level of margin the Underlying ETF is required to deposit. In many cases, a relatively small price movement in a futures contract may result in immediate and substantial loss or gain to the investor relative to the size of a required margin deposit. In the event no secondary market exists for a particular contract, it might not be possible to effect closing transactions, and the Underlying ETF will be unable to terminate the derivative. If the Underlying ETF uses futures contracts for hedging purposes, there is a risk of imperfect correlation between movements in the prices of the derivatives and movements in the securities or index underlying the derivatives or movements in the prices of the Underlying ETF's investments that are the subject of such hedge. The prices of futures contracts may not correlate perfectly with movements in the securities or index underlying them.

Non-Diversification Risk. The Fund is classified as “non-diversified” under the 1940 Act. As a result, the Fund is only limited as to the percentage of its assets which may be invested in the securities of any one issuer by the diversification requirements imposed by the Internal Revenue Code of 1986, as amended (the “Code”). The Fund may invest a relatively high percentage of its assets in a limited number of issuers. As a result, the Fund may be more susceptible to a single adverse economic or regulatory occurrence affecting one or more of these issuers, experience increased volatility and be highly invested in certain issuers.

Sector Focus Risk. The Fund may invest a larger portion of its assets in one or more sectors than many other funds, and thus will be more susceptible to negative events affecting those sectors.

- **Consumer Discretionary Sector Risk.** Consumer discretionary companies are companies that provide non-essential goods and services, such as retailers, media companies and consumer services. These companies manufacture products and provide discretionary services directly to the consumer, and the success of these companies is tied closely to the performance of the overall domestic and international economy, interest rates, competition and consumer confidence.
- **Energy Sector Risk.** Companies in the energy sector may be adversely affected by, among other things, supply and demand both for their specific product or service and for energy products in general, changes in prices of energy, exploration and production spending, government regulation, world events, exchange rates, economic conditions and energy conservation efforts. Revenues for energy companies may come significantly from a relatively limited number of customers, including governmental entities and utilities. As a result, governmental budget constraints may have a significant impact on energy companies. Energy companies also face a significant threat from accidents resulting in injury, pollution or other environmental concerns and natural disasters.
- **Financial Companies Risk.** Financial companies, such as retail and commercial banks, insurance companies and financial services companies, are especially subject to the adverse effects of economic recession, currency exchange rates, extensive government regulation, decreases in the availability of capital, volatile interest rates, portfolio concentrations in geographic markets, industries or products (such as commercial and residential real estate loans) and competition from new entrants and blurred distinctions in their fields of business.
- **Industrials Sector Risk.** Performance of companies in the industrials sector may be affected by, among other things, supply and demand for their specific product or service and for industrials sector products in general. Moreover, government regulation, world events, exchange rates and economic conditions, technological developments, fuel prices, labor agreements, insurance costs, and liabilities for environmental damage and general civil liabilities will likewise affect the performance of these companies.
- **Materials Sector Risk.** Performance of companies in the materials sector can be significantly impacted by the level and volatility of commodity prices, the exchange value of the dollar, import and export controls, increased competition, liability for environmental damage, depletion of resources, and mandated expenditures for safety and pollution controls.

Securities Exchange Companies Risk. The Fund's investments in the securities in the financial sector may include securities issued by a securities exchange. The business and financial performance of a securities exchange can be impacted by a number of factors, including general economic conditions, market volatility, changes in investment patterns and priorities, preferences for services offered by competing exchanges and other service providers, technology developments and regulatory constraints. A substantial portion of a securities exchange's revenues are derived from data services fees and fees for transactions executed and cleared in its markets. Data subscriptions and trading volumes could decline substantially if market participants reduce their level of spending or trading activities. A reduction in overall trading volume could also render a securities exchange less attractive to market participants as a source of liquidity, which could result in further loss of trading volume and associated transaction-based revenues and in the demand for data and other services. Further, a decline in the initial public offering market, or issuers choosing to list on alternative venues, could have an adverse effect on the revenues of a securities exchange. A securities exchange may not be successful in offering new products or technologies or in identifying opportunities, which could reduce long-term customer demand for services provided by a securities exchange.

Depository Receipts Risk. The Fund may invest in depository receipts. Depository receipts may be subject to certain of the risks associated with direct investments in the securities of foreign companies, such as currency, political, economic and market risks, because their values depend on the performance of the non-dollar denominated underlying foreign securities. Certain countries may limit the ability to convert depository into the underlying foreign securities and vice versa, which may cause the securities of the foreign company to trade at a discount or premium to the market price of the related depository receipts. Depository receipts may be purchased through “sponsored” or “unsponsored” facilities. A sponsored facility is established jointly by a depository and the issuer of the underlying security. A depository may establish an unsponsored facility without participation by the issuer of the deposited security. Unsponsored receipts may involve higher expenses and may be less liquid. Holders of unsponsored depository receipts generally bear all the costs of such facilities, and the depository of an unsponsored facility frequently is under no obligation to distribute shareholder communications received from the issuer of the deposited security or to pass through voting rights to the holders of such receipts in respect of the deposited securities.

Mid-Capitalization Companies Risk. Mid-capitalization companies may be more vulnerable to adverse general market or economic developments, and their securities may be less liquid and may experience greater price volatility than larger, more established companies.

Royalty Trusts Risk. The Fund may invest in publicly traded royalty trusts. Royalty trusts are special purpose vehicles organized as investment trusts created to make investments in operating companies or their cash flows. A royalty trust generally acquires an interest in natural resource companies and distributes the income it receives to the investors of the royalty trust. A sustained decline in demand for the royalty trust’s underlying commodity could adversely affect income and royalty trust revenues and cash flows. Factors that could lead to a decrease in market demand include a recession or other adverse economic conditions, rising interest rates, an increase in the market price of the underlying commodity, higher taxes or other regulatory actions that increase costs, or a shift in consumer demand for the products.

New Fund Risk. As of the date of this prospectus, the Fund has no operating history and fewer assets than larger funds. Like other new funds, large inflows and outflows may impact the Fund’s market exposure for limited periods of time. This impact may be positive or negative, depending on the direction of market movement during the period affected.

Market Maker Risk. If the Fund has lower average daily trading volumes, it may rely on a small number of third-party market makers to provide a market for the purchase and sale of Shares. Any trading halt or other problem relating to the trading activity of these market makers could result in a dramatic change in the spread between the Fund’s net asset value and the price at which the Shares are trading on the Exchange, which could result in a decrease in value of the Shares. In addition, decisions by market makers or Authorized Participants to reduce their role or step away from these activities in times of market stress could inhibit the effectiveness of the arbitrage process in maintaining the relationship between the underlying values of the Fund’s portfolio securities and the Fund’s market price. This reduced effectiveness could result in Shares trading at a discount to net asset value and also in greater than normal intra-day bid-ask spreads for Shares.

Operational Risk. The Fund is exposed to operational risks arising from a number of factors, including, but not limited to, human error, processing and communication errors, errors of the Fund’s service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund and the Adviser seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate to address these risks.

Portfolio Management Risk. The Fund is subject to portfolio management risk because it is an actively managed portfolio. In managing the Fund’s investment portfolio, the portfolio manager will apply investment techniques and risk analyses that may not produce the desired result. There can be no guarantee that the Fund will meet its investment objective. In addition, the Fund may not achieve its investment objective if the portfolio managers take temporary positions in response to unusual or adverse market, economic or political conditions, or other unusual or abnormal circumstances. The investments selected by the Fund’s portfolio manager may underperform the market or other investments.

Active Trading Market Risk. Although the Shares are listed for trading on the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained. Shares trade on the Exchange at market prices that may be below, at or above the Fund’s net asset value. Securities, including the Shares, are subject to market fluctuations and liquidity constraints that may be caused by such factors as economic, political, or regulatory developments, changes in interest rates, and/or perceived trends in securities prices. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to Exchange “circuit breaker” rules. Market makers are under no obligation to make a market in the Fund’s Shares, and authorized participants are not obligated to submit purchase or redemption orders for Creation Units. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. The Fund may have difficulty maintaining its listing on the Exchange in the event the Fund’s assets are small or the Fund does not have enough shareholders. Shares of the Fund could decline in value or underperform other investments.

Authorized Participant Concentration Risk. Only large institutions may engage in creation or redemption transactions directly with the Fund (each, an “Authorized Participant”). The Fund has a limited number of institutions that may act as Authorized Participants on an agency basis (i.e., on behalf of other market participants). To the extent that Authorized Participants exit the business or are unable to

proceed with creation and/or redemption orders with the Fund and no other Authorized Participant is able to step forward to create or redeem Creation Units, Shares may be more likely to trade at a premium or discount to net asset value and possibly face trading halts and/or delisting. This risk may be heightened relating to the Fund's investments in non-U.S. securities because such securities often involve greater settlement and operational issues for Authorized Participants that may further limit the availability of Authorized Participants.

Portfolio Turnover Risk. The Fund may incur high portfolio turnover to manage the Fund's investment exposure. Additionally, active market trading of the Fund's Shares may cause more frequent creation or redemption activities that could, in certain circumstances, increase the number of portfolio transactions. High levels of portfolio transactions increase brokerage and other transaction costs and may result in increased taxable capital gains. Each of these factors could have a negative impact on the performance of the Fund.

Premium/Discount Risk. The market price of the Fund's Shares will generally fluctuate in accordance with changes in the Fund's net asset value as well as the relative supply of and demand for Shares on the Exchange. The Fund cannot predict whether Shares will trade below, at or above their net asset value because the Shares trade on the Exchange at market prices and not at net asset value. Price differences may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for Shares will be closely related, but not identical, to the same forces influencing the prices of the holdings of the Fund trading individually or in the aggregate at any point in time. However, given that Shares can only be purchased and redeemed in Creation Units, and only to and from broker-dealers and large institutional investors that have entered into participation agreements (unlike shares of closed-end funds, which frequently trade at appreciable discounts from, and sometimes at premiums to, their net asset value), the Adviser believes that large discounts or premiums to the net asset value of Shares should not be sustained. During stressed market conditions, the market for the Fund's Shares may become less liquid in response to deteriorating liquidity in the market for the Fund's underlying portfolio holdings, which could in turn lead to differences between the market price of the Fund's Shares and their net asset value. Furthermore, the Fund may at times limit or suspend entirely the issuance of new Creation Units, which could have the effect of enhancing the premium or discount associated with the Fund's Shares.

U.S. Tax Risk. If for any taxable year, the Fund does not qualify as a regulated investment company, all of its taxable income (including its net capital gain) for that year would be subject to tax at regular corporate rates without any deduction for distributions to its shareholders, and such distributions would be taxable to its shareholders as dividend income to the extent of the Fund's current and accumulated earnings and profits. In order to qualify for favorable U.S. federal income tax treatment accorded to regulated investment company, the Fund must derive at least 90% of its gross income in each taxable year from certain categories of income ("qualifying income") and must satisfy certain asset diversification requirements. Certain of the Fund's investments, including certain investments in MLPs and royalty trusts, may generate income that is not qualifying income. The Fund will seek to restrict its income from such investments that do not generate qualifying income to a maximum of 10% of its gross income (when combined with its other investments that produce non-qualifying income) to comply with the qualifying income requirement for the Fund to qualify as a regulated investment company under the Code. However, the Fund may generate more non-qualifying income than anticipated, may not be able to generate qualifying income in a particular taxable year at levels sufficient to meet the qualifying income requirement, or may not be able to accurately predict the non-qualifying income from these investments. Accordingly, the extent to which the Fund invests certain assets may be limited by the qualifying income requirement, which the Fund must continue to satisfy its status as a regulated investment company. Failure to comply with the qualifying income requirement would have significant negative tax consequences to Fund shareholders. Under certain circumstances the Fund may be able to cure a failure to meet the qualifying income requirements, but in order to do so the Fund may incur significant Fund-level taxes, which would effectively reduce (and could eliminate) the Fund's returns.

Cyber Security Risk. The Fund is susceptible to operational risks through breaches in cyber security. A breach in cyber security refers to both intentional and unintentional events that may cause the Fund to lose proprietary information, suffer data corruption or lose operational capacity. Such events could cause the Fund to incur regulatory penalties, reputational damage, additional compliance costs associated with corrective measures and/or financial loss. Cyber security breaches may involve unauthorized access to the Fund's digital information systems through "hacking" or malicious software coding but may also result from outside attacks such as denial-of-service attacks through efforts to make network services unavailable to intended users. In addition, cyber security breaches of the Fund's third-party service providers, such as its administrator, transfer agent, or custodian, as applicable, or issuers in which the Fund invests, can also subject the Fund to many of the same risks associated with direct cyber security breaches. While the Fund has established business continuity plans and risk management systems designed to reduce the risks associated with cyber security, there are inherent limitations in such plans and systems. Additionally, there is no guarantee that such efforts will succeed, especially because the Fund does not directly control the cyber security systems of issuers or third-party service providers.

PERFORMANCE

As of the date of this prospectus, the Fund has not yet commenced operations and therefore does not have a performance history. Once available, the Fund's performance information will be accessible on the Fund's website at www.axsinvestments.com and will provide some indication of the risks of investing in the Fund.

MANAGEMENT

Investment Adviser

AXS Investments LLC

Sub-Adviser

Astoria Portfolio Advisors LLC

Portfolio Manager

John Davi, Chief Investment Officer and Founder of Astoria, is the primary portfolio manager and is responsible for the day-to-day management of the Fund. Mr. Davi has serviced in such capacity since the Fund's inception in December 2021.

PURCHASE AND SALE OF SHARES

The Fund may issue and redeem Shares in exchange for cash at a later date but has no current intention of doing so. Except when aggregated in Creation Units, the Shares are not redeemable securities of the Fund.

Individual Shares of the Fund may only be purchased and sold on the secondary market through a broker-dealer. Since Shares of the Fund trade on securities exchanges in the secondary market at their market price rather than their net asset value, the Fund's Shares may trade at a price greater than (premium) or less than (discount) the Fund's net asset value. An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares of the Fund (bid) and the lowest price a seller is willing to accept for Shares of the Fund (ask) when buying or selling Shares in the secondary market (the "bid-ask spread"). Recent information, including the Fund's net asset value, market price, premiums and discounts, and bid-ask spreads, is available online at www.axsinvestments.com.

TAX INFORMATION

The Fund's distributions will generally be taxable as ordinary income, returns of capital or capital gains. A sale of Shares may result in capital gain or loss.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank), the Adviser and IMST Distributors, LLC, the Fund's distributor, may pay the intermediary for the sale of Shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.
