The AXS Dynamic Opportunity Fund seeks long-term capital appreciation with a short-term focus on capital preservation. It is a distinctive hedged equity strategy designed to help investors participate in the potential upside of the equity markets while reducing downside risks. The portfolio can go anywhere from fully long to fully hedged based on market conditions.

Access to...

High quality equities: Holds best idea stocks whose price movement and trading volume indicate "meaningful breakouts" and that have excellent fundamentals, such as sustainable growth, profitability and good valuations.

Dynamic hedging: Uses a proprietary, rules-based model to determine how much hedging the portfolio needs to mitigate risks and can take short positions in a variety of index ETFs.

Tactical strategies: Can take long or short positions in sector or industry ETFs to tactically gain or reduce exposure to areas where trends are identified.

TERMS AND INDICES

Beta is a measure of the volatility, or systematic risk, of a security or a portfolio in comparison to the market as a whole.

Long is the buying of a security such as a stock, commodity or currency with the expectation that the asset will rise in value.

R-Squared (R²) is a statistical measure expressed as the percentage of a fund's movements that can be explained by movements in a benchmark index.

Short is a sale that is completed by the delivery of a security borrowed by the seller. Short sellers assume they will be able to buy the stock at a lower amount than the price at which they sold short.

Standard Deviation is a statistical measure used to measure historical volatility, where a higher standard deviation indicate higher volatility.

Wilshire Liquid Alternative Global Macro Total Return Index (WLQAGMT) is an index designed to deliver precise market measures for the performance of diversified liquid alternative investment strategies.

IMPORTANT RISK INFORMATION

You could lose money by investing in the Fund. There can be no assurance that the Fund's investment objectives will be achieved. Below are some of the risks associated with investing in the Fund. See the prospectus for more.

Market Risk: The market price of a security or instrument may decline, sometimes rapidly or unpredictably, due to general market conditions that are not specifically related to a particular company, such as real or perceived adverse economic or political conditions throughout the world, changes in the general outlook for corporate earnings, changes in interest or currency rates, or adverse investor sentiment generally.

Equity Risk: The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the industries in which the issuers of securities held by the Acquiring Fund participate, or factors relating to specific companies in which the Fund invests.

Derivatives Risk: Using derivatives, such as options, exposes the Fund to additional or heightened risks, including leverage risk, liquidity risk, valuation risk, market risk, counterparty risk, and credit risk.

Options Risk: Purchasing and writing put and call options are highly specialized activities and entail greater than ordinary investment risks. The Fund may not fully benefit from or may lose money on an option if changes in its value do not correspond as anticipated to changes in the value of the underlying securities.

Short Sales Risk: In connection with a short sale of a security or other instrument, the Fund is subject to the risk that instead of declining, the price of the security or other instrument sold short will rise in which case the Fund will experience a loss.

Investors should carefully consider the investment objectives, risks, charges and expenses of AXS Dynamic Opportunity Fund. This and other important information about the Fund is contained in the Prospectus, which can be obtained by visiting www.axsinvestments.com. The Prospectus should be read carefully before investing.
